The Role of Emotions in Learning: Capitalize on It to Improve Learning

Saundra Yancy McGuire, Ph.D.
Retired Asst. Vice Chancellor & Professor of Chemistry
Director Emerita, Center for Academic Success
Louisiana State University
Reflection Question

Have you ever experienced a situation in which fear (or nervousness) made you unable to do something you were actually capable of?
The Role of Emotions in Learning

- Inadequate learning is correlated with negative emotions and vice versa

- Anxiety lessens the ability to learn

- Confidence in potential for success increases motivation

- Feelings of hopelessness or helplessness decrease motivation for learning

Learned Helplessness*

Based on prior experience, the feeling that no amount of effort will bring success destroys motivation to attempt a task.

*Martin Seligman and Steven F. Maier
Remediation of Learned Helplessness Requires That We:

- Understand the causes

- Help students understand the distorted beliefs and misperceptions that are causing their current deficits

- Provide students the tools to change their behavior and refute their distorted beliefs
The Cure for Learned Helplessness

- Understanding your “explanatory style”
- Changing the negative, self-destructive things you say to yourself when you fail
- Making the new statements a permanent part of your explanatory style
- Recognizing that perception of ability has the most influence on the amount of effort you will expend on a task!
Think/Pair/Share

- Think of something at which you were once very bad, but improved considerably

- Think of something at which you were once very bad, but did not improve

- What caused the difference in the result of the two situations?
The Physiology of Emotions
Amygdala: The physiological seat of emotions
Cortisol receptors are most prominent in the hippocampus. The hippocampus organizes factual information and sends it to long-term memory.
The Role of Cortisol

- Stress increases cortisol production
- More cortisol receptors in the hippocampus
- Presence of cortisol decreases the glucose metabolism in the brain
- Increased cortisol results in temporary memory loss and impairment of long term memory
Ways to Create Positive Feelings and Reduce Anxiety

- Introduce engaging, fun activity if possible. Let students know that everyone can succeed.
- Show the tutor’s human side.
- Demonstrate an active interest in having every student succeed.
- Emphasize the importance of effort, rather than prior preparation, in performance.
- Help students learn to use their learning style preferences.
Can Learning Styles Help Students Learn?

Date: Fri, Oct 19, 2012 at 4:35 PM

Greg,

Good news, I redeemed myself from my first physics exam bomb with a 99% on the exam I took the day after we spoke. I have been reading on the LSU site you gave me and I really like it. I took their right brain or left brain quiz designed to suggest what learning style best suits you and I landed 50/50 for right-left brain dominance, so that left me with a lot of suggestions... I've also made myself a new weekly schedule with 1 hour study blocks of all of my subjects in one day… Cutting out the cell phone and recreational internet during study time is something else I really like. Just wanted to give you an update and thank you again for the meeting.

Best, Reg

The Role of Confidence in Learning

Students are more likely to attempt activities at which they feel confident they can be successful.

Tutors can give students the confidence to try, and the strategies to succeed!
The Connection Between Emotions, Motivation, and Learning

Positive emotions lead to increased motivation, which leads to increased learning, which leads to increased success, which results in positive emotions.
Motivation

“In the academy, the term ‘motivating’ means *stimulating interest in a subject* and, therefore, the *desire to learn it*.”

(Nilson, 57)
Three Important Levers that Influence Motivation

- **Value** – the importance of a goal (attainment, intrinsic, instrumental)
- **Supportive Nature of the Environment** – the instructor is approachable, support is available from peers and others
- **Efficacy Expectancies** – the belief that one is capable of identifying, organizing, initiating, and executing a course of action that will bring about a desired outcome

Ambrose et al., 80
Sharing Strategies that Have Worked for Others Can Be Very Motivational
Top 5 Reasons Folks Did Not Do Well on Test 1 in General Chemistry

1. Didn’t spend enough time on the material
2. Started the homework too late
3. Didn’t memorize the information I needed to memorize
4. Did not use the book
5. Assumed I understood information that I had read and re-read, but had not applied
Top 5 Reasons Folks Made an A on Test 1:

1. Did preview-review for every class
2. Did a little of the homework at a time
3. Used the book and did the suggested problems
4. Made flashcards of the information to be memorized
5. Practiced explaining the information to others
At the end of a 60 minute learning strategies presentation by the professor, students were given a survey to determine their self-assessment whether they were using or not using the strategies. The average scores of the different groups on the first two exams are shown below.

<table>
<thead>
<tr>
<th>Reported Use of Strategies</th>
<th>Exam 1</th>
<th>Exam 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>Did not use the strategies</td>
<td>58</td>
<td>54</td>
</tr>
<tr>
<td>Used metacognitive strategies</td>
<td>95</td>
<td>80</td>
</tr>
</tbody>
</table>
Put the joy back into learning by creating a very positive emotional experience and motivating your students to learn!
