Environmental Assistant

Welcome to the EHSA Web Portal

Environmental Health Safety Assistant (EHSA) is an environmental management database that is available online to researchers and staff within the LSU community. EHSA is user friendly and provides strong inventory and training programs with compliance features.

The program is web based. Your ID is the first part of your PAWS email. Your initial password is 1234. You will be required to change your password when you first log on. We have set the internal security so that you should be able to see information relating to your research group.

The EHSA web application makes it easy to access EHS online training and request a hazardous waste pick-up. You do not need to request access for these tasks.

EHSA also facilitates advanced tasks. These tasks include managing chemical and biological inventories, registering a laboratory or chemical storage space, and new project review. To perform these advanced tasks, lab personnel have to be in the EHSA system. New PIs are requested to contact EHS and part of setting up a new lab. PI’s can use the permit worker section can be used to add or delete personnel as needed. The training section shows the status of online training for lab personnel. If you need to perform any of these tasks, please refer to the tutorials below, prior to initiating the login process to EHSA.

Additional information and function are being added to the system on a regular basis. Currently the Admin, Emergency Response, and Department Blocks are not active. Feel free to call (5-4314) or Email (steward@lsu.edu) with problems, suggestions, or concerns.
